

# DATALOG SCREEN FLOWING INSTRUCTIONS

## ASSEMBLY :

- Glue TFT.  
BE CAREFUL TO NOT  
OVER FLOW ON THE  
OTHERSIDE!

HOT GLUE

USE A LITTLE GLUE AT FIRST  
TO SEAL, THEN GO AGAIN.

If you mess up the hot glue, when  
you remove it you can end up  
popping out the LCD.

- CUT MATRIX TO FIT, DO NOT CUT BACK TRACES!

## PARTS

<https://www.adafruit.com/product/419>

- KEY PAD

<https://www.adafruit.com/product/358>

- 1.8" TFT LCD

CONNECT KEY PAD  
TO BENT HEADERS  
FROM 13 → 14.

ATTACH MATRIX.

HOLD DOWN WITH  
FEATHER BOARD  
TO SEE WHERE CO  
GLOES

NOTE THE ANGLE.

Solder a female header row for connecting to the TFT screen. If you want, you can label the header row via printing a label. I made mine using our PTouch printer. I still have the file saved. 7.2pt is 0.1" so setting the font to 7pt is approximately one PCB spacing.

One can use a ribbon cable for convenience

Attach a 3 pin male header for power distribution. Complete! Label the TFT\_CS, SD\_CS, and D/C pins for future convenience and you're finished!
